

# New movement in the classroom

Introducing a learning aid that gets children  
out of their seats for the right reasons

“Flexiclass promotes interactive learning”

Making learning more fun

# Flexiclass

Flexiclass is an interactive learning aid that gets children out of their seats for all the right reasons. Developed in Scandinavia; it is already used in approximately 10,000 primary, secondary and tertiary classrooms in Northern Europe. It is a wall-mounted rail system which allows lightweight writing and presentation boards to be lifted on and off the rails and placed at different heights; giving pupils the opportunity to be actively involved in learning activities.

With the requirement for flexible teaching arrangements, comes a need for equally flexible teaching areas. The combination of lightweight Futura Rail and Chart Rail products fitted along all walls enables you to add, remove and arrange projection screens, charts and writing boards wherever you need them; creating a flexible space.

## Creative Teaching & Learning

- Interactive = Engagement + Fun
- Building Team-Working Life Skills
- Make Classrooms More Flexible

Futura, a simple rail system affixed to the wall, has an ingenious slot in the base allowing loose leaf paper to be hung at any location. Lightweight boards can easily be lifted on and off the rails by pupils and used both horizontally for group learning and vertically for display and discussion. The design of the Futura system allows the lightweight boards to glide smoothly along to where you need them. Walls can still be used to display posters and artwork between the rails. This flexible system can be used in sports halls, libraries, staff bases and even in outdoor environmental education spaces where equipment can be shared between spaces to maximise value.

The presentation boards can be double-sided, maximising writing space and allowing lessons to be prepared in advance and turned around when needed. Choose from a selection of finishes, including striking blue magnetic chalkboards, pinboards, magnetic whiteboards and interactive multi-media boards. All boards can be instantly converted to flipcharts by simply hooking on the aluminium Snap Rail.

Futura Rail

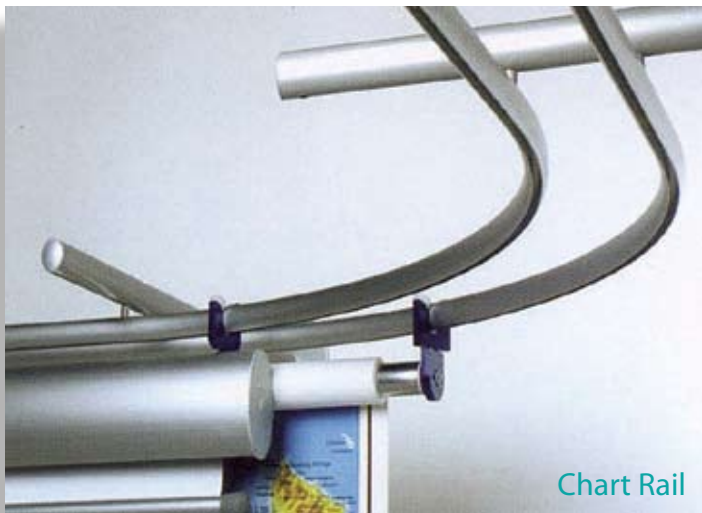

Chart Rail is an elegant, architectural solution allowing up to 7 'layers' of projection screens, maps, or other educational charts to be used simultaneously around all four walls.

Don't just take our word that Flexiclass can transform your classroom – ask for a consultation or our inspiring demonstration DVD showing Flexiclass in use. Just call on our Freephone number, e-mail us or make a request through our website
