

Your Problem- Our Solution

Developed in Partnership with Educators

ESA MCINTOSH

LearningWall, the solution for multi-purpose classrooms

“A teaching resource which fully engages pupils and focuses their attention”

LearningWall

ESA McIntosh, in partnership with educators, recognised an opportunity for improvement in the key areas of classroom storage and teaching media. LearningWall™, a modular storage and teaching resource, was designed in response to this and is a valuable tool that has been introduced into hundreds of classrooms.

The flexible LearningWall™ system allows teachers to interchange the full range of teaching media to promote both small groups and whole-class learning. This is achieved by cleverly mounting different media in sliding layers. Media can include interactive whiteboards, rollerboards, pinboards, projection screens and whiteboards. Multi-purpose classrooms are now being used to teach numerous subjects with teachers using teaching styles best suited to the class work. Providing a range of media options allows movement of teachers between classrooms, maximising the use of these areas.

Planning storage in a single zone at the front of the classroom maximises the use of this often under-utilised area, leaving you the flexibility to arrange the rest of the space to suit your classroom activities. The multi-functional LearningWall™ accommodates a variety of storage options including plastic trays, suspended filing cradles, shelves, pigeon-holes, drawers, laptop storage and charging. Available in a wide range of finishes, it forms an attractive centrepiece for any classroom.

Your Problem - Our Solution

- Generous, flexible resource storage - at your fingertips.
- Flexible use of whiteboards, interactive whiteboards, roller boards and pinboards - all in the same classroom.
- Main classroom space can be flexibly adapted to any teaching style or subject area.

School teachers currently using LearningWall™ report the storage aspect as “fantastic” and “more useful than conventionally fitted classrooms”. The majority found the increased writing area and the ability to use the different media products simultaneously, ‘very useful’.
