

## SSERC

*"We are very happy with the finished laboratory and the service received."*

Technical Officer Team, SSERC

The Scottish Schools Equipment Research Centre is a not-for-profit research centre and advisory body providing technical support to schools and colleges in Scotland. When they re-located to Dunfermline and needed to furnish their facilities SSERC Chief Executive Officer, Fred Young, selected ESA McIntosh to create a solution.

Due to previous experience working with ESA McIntosh, Mr Young was assured of an excellent standard of workmanship. Robert Jensen, area manager for Scotland, worked closely with SSERC to ensure the specification of this project was clearly defined.

This research facility provides health and safety advice to schools and Local Authorities. They also test apparatus for safety, performance & conformance with standards. SSERC wanted to incorporate a variety of work surfaces to test their resilience during experiments and illustrate to visitors those which are most appropriate for a laboratory environment. ESA McIntosh also provided suitable storage, sinks, taps and safety equipment.

Designer Jackie Fox maximised the potential space while Kevin Fox, the project estimator, put together the most cost effective package which included a combination of Corian, Trespa and Iroko worktops. Jackie Weepers, one of our senior project manager; supervised the installation to ensure the work was carried out to our usual high standards and completed to the customer's satisfaction.

We are extremely pleased to have worked for SSERC as they are an important and influential organisation in the education sector.
